E-Mail: anirbansikdar102@gmail.com

Objective

Results-driven Software Test Engineer with **5+ years of experience** in manual and automation testing of web-based applications across multiple domains. Experienced in designing and executing test cases, defect tracking, and ensuring high-quality software delivery. Proficient in **Selenium WebDriver with Java** for automation testing and experienced in **API testing, functional, regression, and smoke testing**. Hands-on experience in **performance testing using Apache JMeter** and **security testing using OWASP ZAP and Burp Suite**. Strong knowledge of **Agile/Scrum methodologies**, test management tools like **JIRA and TestRail**, and continuous improvement of testing processes to enhance product quality, performance, and security. Adept at collaborating with cross-functional teams to deliver reliable and scalable software solutions.

Profile Summary

- Software Test Engineer with **5+ years of experience** in Manual and Automation Testing of web-based applications.
- Hands-on experience in **Selenium WebDriver with Java** for automation testing and framework execution.
- Strong knowledge of **Functional, Regression, Smoke, Sanity, System, Integration, and Ad-hoc testing**.
- Experience in **API testing** and validating application functionality across multiple environments.
- Hands-on experience in **Performance Testing using Apache JMeter** and **Security Testing using OWASP ZAP and Burp Suite**.
- Experienced in **test case design, execution, defect tracking, and test reporting** using **JIRA and TestRail**.
- Good understanding of **Agile/Scrum methodology** and participation in sprint planning, reviews, and retrospectives.
- Strong knowledge of **Core Java and SQL** for automation and database validation.
- Experienced in **end-to-end testing lifecycle**, including test planning, test case development, execution, and defect management.
- Possess strong **analytical, problem-solving, communication, and team collaboration skills**.

Skills

Functional Testing	Regression Testing	Smoke Testing
Sanity Testing	Integration Testing	System Testing
Web Testing	Automation Scripting	Cross-Platform Testing
Test Planning	Agile / Scrum	Git, GitLab
JIRA	TestRail	OWASP ZAP
Burp Suite	Apache JMeter	Postman
API Testing	Core Java	Maven
TestNG	Page Object Model (POM)	Selenium WebDriver
Security Testing	Performance Testing	ChatGPT
GitHub Copilot	Google Gemini	Claude Ai
MTT	Ad-Hoc Testing	MySQL
Jenkins	CI/CD	Unit Testing

➤ Software Test Engineer

▪ Tech Mahindra Limited

❖ Project 1:

Client: BT, Europe.

Duration: Aug 2021 to Aug 2023.

Environment: Java, Maven, Jenkins, wire mock, Unit Testing, Integration Testing, Sanity Testing, Postman, Selenium WebDriver, TestNG, Cucumber.

Project Description:

A Wi-Fi router management platform designed to diagnose and resolve network connectivity issues faced by users. The system enables monitoring of router performance, identification of faults, and provides troubleshooting solutions to ensure stable and reliable internet connectivity.

Responsibilities:

As a Software Tester at BT, I hold a crucial role in guaranteeing the superior quality of software solutions. My responsibilities encompass meticulously executing test plans, identifying defects, and ensuring a seamless user experience. Working within the agile framework, I collaborate cross-functionally to conduct various testing types, contributing to the refinement of software products. My focus on defect documentation and proactive involvement in the software development lifecycle align with BT's commitment to delivering high-performance and reliable solutions. In this dynamic telecommunications environment, my role is pivotal in fortifying BT's reputation for providing cutting-edge and user-centric software, contributing significantly to the organization's success in the tech industry.

❖ .Project 2:

Client: What's App/ Facebook META

Duration: Aug 2023 to Jul 2024.

Environment: MTT, TestRail, Postman, Spark, Manual Testing, Smoke Testing, Regression Testing, Functional Testing, Non-Functional testing, Ad-hoc Testing,

Project Description:

It is a free cross-platform messaging service. It is used in 180 countries by more than 2 billion people. It is a multifunctional, multiplatform messaging app.

Responsibilities:

- Understanding the Client Requirements and functionality of the system.
- Involved in Smoke test for various developed modules (web & app).
- Involved in Regression and Exploratory testing for various modules (web & app).
- Involved in Bug Verification task.
- Involved in Compatibility testing.
- Involved in preparation of Test scenarios for various modules.
- Retesting the test cases where defect has been raised.
- Prepare and Execute of the test cases as per requirements.
- Accessibility testing.

▪ Mjunction Services Limited.

❖ Project 1:

Client: Adani Cement.

Duration: July 2024 to December 2024.

Application: Adani Cement Reward Connect.

Environment: Android, IOS, Web App.

Project Description:

Adani Cement Reward Connect is a **loyalty and rewards management platform** developed for Adani Cement's channel partners such as dealers, retailers, and influencers. The application enables partners to earn reward points for purchasing Adani Cement products and redeem those points for gifts, vouchers, or other benefits through a centralized digital platform.

Responsibilities:

- Understanding **client requirements and system functionality** to ensure proper test coverage.
- Performing **Smoke Testing** on newly developed modules for both **web and mobile applications**.
- Conducting **Regression Testing and Exploratory Testing** for various modules across **web and mobile platforms**.
- Preparing **Test Scenarios and Test Cases** based on business requirements and functional specifications.
- Executing **test cases and documenting test results** as per project requirements.
- Performing **Bug Verification** to confirm that reported defects have been fixed correctly.
- Conducting **Re-testing of test cases** after defects are resolved by the development team.
- Performing **Compatibility Testing** across different browsers and devices.
- Conducting **Accessibility Testing** to ensure the application meets usability and accessibility standards.
- Performing **Performance Testing using Apache JMeter** to evaluate system stability, response time, and scalability under different load conditions.

❖ Project 2:

Client: Bangor Cement.

Duration: November 2024 to April 2025

Application: Bangor Cement Nirman Mitra 2.0

Environment: Android, IOS.

Project Description:

Bangor Cement Nirman Mitra 2.0 is a **loyalty and engagement mobile application** designed for dealers, retailers, contractors, and influencers associated with Bangor Cement. The platform helps strengthen the relationship between the company and its business partners while encouraging product purchases through a reward-based system. The application allows registered members to **record cement purchases, earn reward points, and redeem those points for benefits or gifts**, thereby increasing brand engagement and improving product visibility in the market.

Responsibilities:

- Understanding **business requirements and application functionality** for both **web and mobile platforms**.
- Preparing **test scenarios and test cases** based on functional requirements and user stories.
- Performing **Smoke Testing** on newly developed builds to ensure basic functionality is working correctly.
- Conducting **Functional, Regression, and Exploratory Testing** for various application modules.
- Executing **test cases and documenting test results** as per project requirements.
- Performing **Bug Verification and Re-testing** after defect fixes provided by the development team.
- Conducting **Compatibility Testing** across different browsers, operating systems, and mobile devices.
- Performing **Accessibility Testing** to ensure the application meets usability and accessibility standards.
- Conducting **API Testing using Postman** to validate backend services and data flow.
- Performing **Performance Testing using Apache JMeter** to analyze response time, throughput, and system stability under load.
- Logging and tracking defects using **JIRA** and collaborating with developers to resolve issues.

❖ Project 3:

Client: SAIL(Steel Authority Of India Limited)

Duration: May 2025 to November 2025

Application: SAIL Suraksha Web App

Environment: Web based application

Project Description:

SAIL Suraksha is a **loyalty and engagement platform** developed for **Steel Authority of India Limited (SAIL)** to strengthen relationships with dealers, retailers, contractors, and influencers involved in steel product distribution. The application enables registered members to **earn reward points by purchasing SAIL steel products and redeem them for various rewards**, thereby encouraging product promotion and increasing brand engagement. The platform also provides **secure user registration, purchase tracking, reward point management, redemption facilities, and communication features**, allowing SAIL to connect with its partners and share updates about new products,

promotional campaigns, and company initiatives.

Responsibilities:

- Understanding **business requirements and system functionality** for web and mobile applications.
- Preparing **test scenarios and test cases** based on functional specifications and user stories.
- Performing **Smoke Testing** on new builds to ensure application stability.
- Conducting **Functional, Regression, and Exploratory Testing** for different modules of the application.
- Executing **test cases and documenting results** as per project requirements.
- Performing **Bug Verification and Re-testing** after defect fixes by the development team.
- Conducting **Compatibility Testing** across different browsers, devices, and operating systems.
- Performing **Accessibility Testing** to ensure the application meets usability and accessibility standards.
- Conducting **API Testing using Postman** to validate backend services and data exchange.
- Performing **Performance Testing using Apache JMeter** to analyze system performance under different load conditions.
- Conducting **Security Testing using OWASP ZAP and Burp Suite** to identify potential vulnerabilities.
- Logging and tracking defects using **JIRA** and collaborating with developers for timely resolution.

❖ **Current Projects:**

Client: Mjunction (Internal Projects)

Duration: December 2025 to Present

Applications: Vendor Portal, Internal Procurement, AGRO E-Auction Platform, Metaljunction E-Auction Platform

Project Description:

1. Vendor Portal

The **Vendor Portal** is a web-based platform designed to streamline vendor management and procurement processes. It allows vendors to **register, submit quotations, manage orders, upload invoices, and track payment status**. The portal improves transparency and communication between vendors and the organization while simplifying procurement workflows.

2. Internal Procurement System

The **Internal Procurement System** is an enterprise application used by internal departments to manage procurement activities efficiently. The system enables users to **create purchase requests, approve procurement workflows, manage vendor quotations, and track order fulfillment**. It helps organizations maintain better control over purchasing operations and ensures compliance with procurement policies.

3. AGRO E-Auction Platform

The **AGRO E-Auction Platform** is an online auction system designed for trading agricultural products such as grains, crops, and commodities. The platform enables buyers and sellers to **participate in transparent and competitive auctions**, ensuring fair pricing and efficient transactions.

4. Metaljunction E-Auction Platform

The **Metaljunction E-Auction Platform** is a digital marketplace used for conducting **online auctions of industrial commodities such as steel, coal, and metal products**. The system allows buyers and sellers to participate in **transparent, secure, and real-time auctions**, helping organizations streamline procurement and sales operations.

Responsibilities:

- Understanding **business requirements and system functionality** for web and mobile applications.
- Preparing **test scenarios and test cases** based on functional specifications and user stories.
- Performing **Smoke Testing** on new builds to ensure application stability.
- Conducting **Functional, Regression, and Exploratory Testing** for different modules of the application.
- Executing **test cases and documenting results** as per project requirements.
- Performing **Bug Verification and Re-testing** after defect fixes by the development team.
- Conducting **Compatibility Testing** across different browsers, devices, and operating systems.
- Performing **Accessibility Testing** to ensure the application meets usability and accessibility standards.
- Conducting **API Testing using Postman** to validate backend services and data exchange.
- Performing **Performance Testing using Apache JMeter** to analyze system performance under different load conditions.
- Conducting **Security Testing using OWASP ZAP and Burp Suite** to identify potential vulnerabilities.
- Developed and executed **Selenium WebDriver automation scripts using Java** for functional and regression testing.
- Designed and implemented an **automation framework for the E-Auction platform to validate bidding logic and critical auction workflows**.

- Logging and tracking defects using **JIRA** and collaborating with developers for timely resolution.
- Participating in **Agile ceremonies** including sprint planning, daily stand-ups, sprint reviews, and retrospectives.

S

Educational Qualification

Graduation:

- **Degree**- Bachelor of Technology in Computer Science and Engineering
- **College**- B. P. Poddar Institute of Management and Technology
- **Year**- 2017-2020
- **Marks Obtained**- 75.6%

Diploma:

- **Degree**- Diploma in Computer Science and Technology
- **College**- Saroj Mohan Institute of Technology
- **Year**- 2014-2017
- **Marks obtained**- 66.65%

Schooling:

3

- **Degree**-Higher Secondary Education
- **Institute**- B. S. Center
- **Year of completion**- 2014
- **Marks obtained**- 64.4%
- **Degree**- Secondary Education
- **Institute**- Madhyamgram High School
- **Year of completion**- 2011
- **Marks obtained**- 62.75%

Training/Courses

- Completed a course UI/UX Development using JavaScript and Node.JS from Globsyn Kolkata.
- Completed Certification on Azure Fundamentals (AZ-900) from Microsoft.
- Completed Certification on Selenium Automation from Refer Me Institute.
- Completed Certification on Core Java from Udemy(Tech Mahindra).

Languages Known

- English
- Hindi
- Bengali

Award/Achievements

- Awarded by **Tech Mahindra** as an **AQT Ninja** for demonstrating technology proficiency and commitment towards Automation Vision and Strategy.
- **Applause Award – mjunction Services Limited**- Recognized for outstanding contribution in **Security Testing**, identifying potential vulnerabilities and supporting the team in improving overall application security and quality.
- **Spotlight Award – mjunction Services Limited** – Awarded for successful **automation testing of the redemption fulfilment workflow for the loyalty program**.
- **Spotlight Award – mjunction Services Limited** – Recognized for developing a **Selenium automation POC for RACE auction rule testing**.
- **Spotlight Award – mjunction Services Limited** – Awarded for completing **OWASP ZAP integration POC** to enhance automated security testing.
