PROFESSIONAL SUMMARY

Software Test Engineer with 5+ years of experience in manual and automation testing of web and mobile applications, delivered for 6 enterprise clients across B2B e-commerce, e-auction, procurement, loyalty and telecom domains. Skilled in Selenium WebDriver with Java, TestNG, Maven and the Page Object Model for designing and maintaining automation frameworks. Hands-on with API testing in Postman, performance testing in Apache JMeter, and security testing using OWASP ZAP and Burp Suite. Experienced in test planning, test case design, defect management and test reporting in JIRA and TestRail within Agile and Scrum delivery. Winner of 5 organizational awards for contributions to automation and security testing.

TECHNICAL SKILLS

Automation Testing: Selenium WebDriver, Core Java, TestNG, Maven, Page Object Model (POM), Cucumber (BDD), Automation Scripting

API & Database Testing: Postman, REST API Testing, Response Validation, MySQL, SQL, WireMock

Performance Testing: Apache JMeter, Load Testing, Stress Testing, Scalability and Response Time Analysis

Security Testing: OWASP ZAP, Burp Suite, OWASP Top 10, Vulnerability Assessment

Test Management & CI/CD: JIRA, TestRail, MTT, Jenkins, CI/CD, Git, GitLab

Testing Types: Functional, Regression, Smoke, Sanity, System, Integration, Unit, Ad-hoc, Exploratory, Compatibility, Accessibility, Cross-Platform, Web and Mobile

Methodologies: Agile, Scrum, STLC, Test Planning, Test Case Design, Defect Life Cycle, Root Cause Analysis, Test Reporting

AI Tools: ChatGPT, GitHub Copilot, Google Gemini, Claude AI

WORK EXPERIENCE

mjunction Services Limited | Software Test Engineer

Kolkata, India | Jul 2024 - Present

Quality ownership across mjunction's B2B digital commerce platforms and its major client loyalty portfolio.

mjunction Internal Platforms (Dec 2025 - Present)

Vendor Portal, Internal Procurement System, AGRO E-Auction Platform, Metaljunction E-Auction Platform

- Designed and built an automation framework covering bidding logic, rank calculation and business-critical auction workflows across 2 e-auction platforms, AGRO and Metaljunction.
- Developed Selenium WebDriver scripts in Java with TestNG and Maven, widening scripted functional and regression coverage across 4 enterprise platforms.
- Validated 5 Vendor Portal workflows spanning vendor registration, quotation submission, order management, invoice upload and payment status tracking.
- Verified purchase request creation, multi-level approval routing, vendor quotation handling and order fulfillment in the Internal Procurement System.
- Uncovered security vulnerabilities in real-time auction flows using OWASP ZAP and Burp Suite assessments, reporting each for remediation before release.
- Profiled data exchange across 4 integrated platforms with Postman API collections and captured system behavior under concurrent load in JMeter.
- Queried MySQL databases to confirm backend data integrity, then tracked defects to closure in JIRA with the development team.

SAIL Suraksha (May 2025 - Nov 2025)

Client: Steel Authority of India Limited (SAIL) | Web Application

Loyalty and engagement platform for dealers, retailers, contractors and influencers in steel product distribution, spanning secure registration, purchase tracking, reward point management and redemption.

- Owned end-to-end test coverage across 5 core modules, running functional, regression, integration and exploratory passes for every release.
- Assessed the platform against OWASP Top 10 risks using OWASP ZAP and Burp Suite, strengthening overall application security.
- Benchmarked response time and throughput under varying load conditions in JMeter, and validated backend services with Postman.
- Confirmed cross-browser, cross-device and accessibility compliance across desktop and mobile environments.

Bangor Cement - Nirman Mitra 2.0 (Nov 2024 - Apr 2025)

Client: Bangor Cement | Android and iOS

Loyalty and engagement mobile application enabling dealers and retailers to record purchases, earn reward points and redeem them for benefits.

- Authored test scenarios and test cases from functional requirements and user stories for a loyalty application shipping on 2 mobile platforms.
- Ran smoke, functional, regression and exploratory cycles across purchase recording, reward accrual and redemption journeys.
- Exercised service endpoints and data flow with Postman API test collections.
- Measured throughput and system stability during sustained load runs in JMeter.
- Logged and monitored defects in JIRA, partnering with developers until resolution.

Adani Cement - Reward Connect (Jul 2024 - Dec 2024)

Client: Adani Cement | Android, iOS and Web

Loyalty and rewards management platform for channel partners, enabling reward point accrual on purchases and redemption for gifts and vouchers.

- Led testing across 3 delivery channels, Android, iOS and web, for a rewards platform serving Adani Cement's distribution network.
- Drafted test scenarios and cases from business requirements and functional specifications, documenting results to project standards.
- Reproduced reported defects and closed them out via structured bug verification and re-testing.
- Evaluated scalability and response time under peak-load simulations in JMeter.
- Screened the application for accessibility and cross-device compatibility across browsers and operating systems.

Tech Mahindra Limited | Software Test Engineer

India | Aug 2021 - Jul 2024

WhatsApp / Facebook (META) Messaging (Aug 2023 - Jul 2024)

Client: WhatsApp / Facebook META | Web and Mobile

- Tested web and mobile modules of a cross-platform messaging service used by over 2 billion people across 180 countries.
- Drove smoke, regression and exploratory testing on new builds, then retested every module where a defect had been raised.
- Reviewed accessibility and device compatibility across Android, iOS and web clients.
- Maintained test cases, execution results and defect records in MTT and TestRail.

Wi-Fi Router Management Platform (Aug 2021 - Aug 2023)

Client: BT, Europe | Telecom

Platform for diagnosing and resolving home network connectivity issues, monitoring router performance, identifying faults and surfacing troubleshooting steps.

- Supported release quality for a router management platform serving BT's European broadband customers.
- Automated regression coverage with Selenium WebDriver, TestNG and Cucumber BDD in Java, orchestrated by Maven and Jenkins.
- Isolated integration defects by stubbing dependent services in WireMock and asserting API contracts in Postman.
- Advanced the account's Automation Vision and Strategy, earning recognition as an AQT Ninja for technology proficiency.
- Coordinated defect triage, root cause analysis and release sign-off with distributed development and support teams.

AWARDS & RECOGNITION

- AQT Ninja, Tech Mahindra: awarded for technology proficiency and commitment toward the account's Automation Vision and Strategy.
- Applause Award, mjunction: recognized for outstanding contribution to security testing, identifying potential vulnerabilities and improving overall application quality.
- Spotlight Award, mjunction, 3 times: for scripting a loyalty redemption fulfillment workflow; for a Selenium proof of concept for RACE auction rules; and for an OWASP ZAP integration that extended security scanning.

CERTIFICATIONS

- Microsoft Certified: Azure Fundamentals (AZ-900), issued by Microsoft.
- Selenium Automation certification, Refer Me Institute.
- Core Java certification, Udemy, sponsored by Tech Mahindra.
- UI/UX Development using JavaScript and Node.js, Globsyn, Kolkata.
